PROFESSIONAL SUMMARY

AI-focused software engineer who designs, integrates, and ships LLM-powered product capabilities (APIs, prompts-as-code, evaluation-minded workflows) alongside full-stack web applications. Works in an AI-native development workflow (Cursor and modern LLM tooling) to move faster on implementation and refactors while keeping code review, testing, and architecture non-negotiable. Strong production background in biometric and customer-facing software, AWS and Ansible-based operations, and measurable platform wins including ~90% reduction in file usage and scalable, maintainable infrastructure.

PROFESSIONAL EXPERIENCE

Idemia-NSS

Software Engineer

Jun 2024 - Present

Morgantown, WV • Hybrid

- Reduced overall project technical debt by 40% within three months by modernizing legacy Java services and introducing modern code standards, directly improving application stability and system performance
- Delivered 5+ mission-critical full-stack features for national security clients, leveraging Angular, Spring Boot, and PostgreSQL technologies, significantly enhancing system reliability and user experience
- Architected high-performance microservices using Java Spring Boot, optimized PostgreSQL queries, and developed reactive Angular frontends, resulting in a 30% improvement in application performance
- Collaborated with cross-functional Agile/SAFe teams to consistently deliver 5+ features on schedule, ensuring project milestones were met

Idemia-NSS

Software Engineering Intern

Mar 2022 - Apr 2024

Morgantown, WV • Onsite

- Revamped Jenkins CI/CD pipeline architecture with a modular design, leading to a 70% reduction in build, test, and deployment times
- Refactored build infrastructure into reusable components, streamlining maintenance processes and easing onboarding for new team members, resulting in 25% improvement
- Enhanced multi-platform mobile applications with the latest Android and iOS SDKs, resulting in improved by 30% stability and performance

River Point Technology

Software Engineering Intern

May 2021 - Aug 2021
Washington, PA • Hybrid

- Implemented Terraform Infrastructure-as-Code for AWS cloud resources, reducing new environment setup time by 50% and enhancing scalability
- Automated continuous delivery with GitLab CI/CD pipelines, enabling rapid deployments across staging and production environments
- Established a centralized engineering knowledge base using MkDocs and Markdown, documenting code patterns to facilitate developer onboarding, resulting in 25% improvement

EDUCATION

West Virginia University

Bachelor of Science in Computer Science

May 2024

Morgantown, WV

- Dean's List
- PROMISE Scholarship
- Scholarship of Distinction
- Operating Systems
- AWS Senior Capstone
- Penetration Testing
- SysAdmin
- Blue Team
- Ansible
- AI/ML
- Custom Language Construction

PROJECTS

us-election-tracker

Tech Stack: React, Node.js, Python

Shipped a data-driven election tracking app with a React UI, Node APIs, and Python for data ingestion or analysis pipelines.

<https://us-election-tracker.com/>

devresumes.com

Tech Stack: JavaScript, React, Next.js

Built a Next.js resume product with guided editing, PDF export, and AI-assisted parsing so users can go from upload or scratch to a polished document.

<https://devresumes.com>

dungeonhelper

Tech Stack: TypeScript, React, Next.js

Shipped a Destiny 2 companion in Next.js and TypeScript that surfaces dungeon mechanics and loadout guidance in a focused, mobile-friendly UI.

<https://github.com/justinscott12/dungeonhelper>

averylightfx

Tech Stack: TypeScript, Node.js, Express.js, MongoDB

Built a community holiday light-show presence as a TypeScript full stack on Express and MongoDB, emphasizing visit info, show status, donations, and media so guests can plan a drive-up visit with synced-radio audio and on-site details (address + maps).

<https://averylightfx.com/>

youre-being-robbed

Tech Stack: TypeScript, Node.js, Express.js, MongoDB

Built a wealth-inequality awareness experience as a TypeScript full stack on Express and MongoDB, emphasizing structured evidence and exploration of real wages, housing affordability, and wealth concentration—clear narrative and CTAs so visitors can dig into the data.
