

Justin Scott

AI-Native Full-Stack Engineer

jscottwv@gmail.com • (304) 282-4087 • <https://www.linkedin.com/in/justin-scott12/>
• <https://github.com/justinscott12> • <https://justin-scott.dev/> • Tampa, FL

PROFESSIONAL SUMMARY

Full-stack engineer with an AI-native workflow. Built 15+ end-to-end projects in two years across web, mobile, and CLI, including 4 live B2C sites (devresumes.com, us-election-tracker.com, yourebeingrobbed.com, averylightfx.com) and 10+ AI/agent prototypes — production RAG systems, agentic tools, and a Model Context Protocol server. Strong across TypeScript/Next.js, Java/Spring Boot, Python/FastAPI, and Expo/React Native. AI-native dev workflow (Cursor, Claude) is the throughput multiplier; tests, code review, and shipped reliability stay non-negotiable.

PROFESSIONAL EXPERIENCE

Idemia-NSS

Software Engineer

Jun 2024 - Present
Morgantown, WV • Hybrid

- Cut project technical debt ~40% in three months by modernizing legacy Java services and tightening code standards
- Ship full-stack features in Angular + Spring Boot + PostgreSQL for enterprise clients in highly regulated industries — emphasis on reliability, security, and audit-ready code paths
- Improved application performance ~30% via Spring Boot microservice design, PostgreSQL query tuning, and reactive Angular frontend
- Use AI tooling (Cursor, Claude) for spikes, refactors, and exploratory work; production changes go through standard team review, testing, and release

Idemia-NSS

Software Engineering Intern

Mar 2022 - Apr 2024
Morgantown, WV • Onsite

- Refactored Jenkins CI/CD pipeline architecture into modular reusable components — 70% reduction in build, test, and deploy times
- Restructured build infrastructure into reusable Jenkins components, reducing maintenance overhead and speeding onboarding for new engineers
- Modernized multi-platform mobile apps to current Android and iOS SDKs

River Point Technology

Software Engineering Intern

May 2021 - Aug 2021
Washington, PA • Hybrid

- Implemented Terraform Infrastructure-as-Code for AWS resources, reducing new environment setup time by 50%
- Automated continuous delivery via GitLab CI/CD pipelines across staging and production environments
- Built a centralized MkDocs/Markdown engineering knowledge base documenting code patterns and runbooks for new contributors

EDUCATION

West Virginia University

Bachelor of Science in Computer Science

May 2024

Morgantown, WV

- Dean's List
- PROMISE Scholarship
- Scholarship of Distinction
- Operating Systems
- AWS Senior Capstone
- Penetration Testing
- SysAdmin
- Blue Team
- Ansible
- AI/ML
- Custom Language Construction

PROJECTS

Devresumes.com

Tech Stack: Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Spring Boot, Java, Neon (serverless Postgres), GCP Cloud Run, OpenAI API, Stripe, GitHub OAuth, JWT, Docker, Jest, GitHub Actions

Live B2C product — AI-powered resume builder for developers. GitHub OAuth pulls projects directly from your repos, OpenAI parses uploads or pasted text into structured profiles with schema validation, and real-time ATS scoring tailors output to a target job description. Stripe Checkout for paid tiers, resume analyzer for shareability. Spring Boot + JPA backend on GCP Cloud Run with Neon serverless Postgres — scale-to-zero infra keeps idle cost near \$0 while handling bursty traffic.

<https://devresumes.com>

US Election Tracker

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Netlify Blobs, Python, Node.js

Live data-heavy election site: presidential history, state hubs, live results, and demographics. Interactive SVG US map with click-to-detail panels backed by structured TypeScript datasets. Authenticated REST API lets editorial updates ship without redeploying — built for election-night workflows. SEO-first: sitemap, JSON-LD, Open Graph; Python and Node validation scripts to keep datasets honest.

<https://us-election-tracker.com>

Otto (in development)

Tech Stack: TypeScript, Expo, React Native, Fastify, Node.js, SQLite

Mobile-first B2C Car maintenance reminder and service history app — still in development. Expo client with offline SQLite "garage," VIN decode via NHTSA vPIC API, calibration wizard for new vehicles, and dual due-by-mileage / due-by-date logic with local notifications and receipt photos. Optional account, cloud sync, Stripe Pro tier, and PDF export served by a small Fastify API. Monorepo with shared Zod schemas between mobile and API for end-to-end type safety.

dungeonhelper

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, RAG, OpenAI Embeddings, Pinecone, Anthropic Claude, Zod, Radix UI

Production RAG assistant for Destiny 2 dungeon mechanics: OpenAI embeddings + Pinecone retrieval + Claude streaming, served via Next.js API routes. Production cost controls — Zod request validation, IP rate limiting, and response caching to manage API spend and latency. Streaming UI for perceived speed during contest-style live play.

<https://github.com/justinscott12/dungeonhelper>

averylightfx

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, NextAuth.js, Next.js API Routes, axios

Live community holiday light-show site: visit info, Venmo donations, schedule, and seasonal Halloween / Christmas theming. Authenticated admin panel drives the live xSchedule lighting rig — playback, playlists, audio, brightness — with NextAuth + bcrypt-backed credentials and API routes for schedule and theme data.

<https://averylightfx.com>

youre-being-robbed

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Recharts, Lucide React

Live data-viz site on US wealth inequality: wages, housing, healthcare, corporate profits vs wages. 10+ interactive Recharts visualizations built on government-sourced data, tabbed navigation with section-specific titles for SEO and shareability.
