

Justin Scott

Full-Stack Engineer — LLM Product Features & AI-Assisted Development

jscottwv@gmail.com • (304) 282-4087 • <https://www.linkedin.com/in/justin-scott12/> •
<https://github.com/justinscott12> • <https://justin-scott.dev/> • Morgantown, WV

PROFESSIONAL SUMMARY

Full-stack engineer shipping production features for security-sensitive clients: Angular and Spring Boot services, PostgreSQL, and microservices. Owns end-to-end delivery, performance work, and sustained quality (code review, testing, architecture). Builds LLM-powered product flows in public work—notably AI-assisted resume parsing and guided editing on devresumes.com (upload or scratch → structured profile → export). Day-to-day AI-native development with Cursor and similar tools for faster implementation and refactors; changes stay grounded in tests, review, and clear rollout. Strong AWS, Terraform, and CI/CD background from internships and platform work.

PROFESSIONAL EXPERIENCE

Idemia-NSS

Software Engineer

Jun 2024 - Present
Morgantown, WV • Hybrid

- Cut project technical debt ~40% in three months by modernizing legacy Java services and tightening code standards, improving stability and performance
 - Delivered multiple mission-critical full-stack features for national security clients using Angular, Spring Boot, and PostgreSQL, improving reliability and UX in production
 - Improved application performance ~30% via Spring Boot microservice design, PostgreSQL query tuning, and reactive Angular frontend
 - Collaborated in Agile/SAFe teams to deliver multiple features per increment on schedule, aligning engineering delivery with program milestones and dependencies
 - Uses AI-assisted development tools (e.g. Cursor) for faster spikes and refactors; all production changes follow team review, testing, and release standards
-

Idemia-NSS

Software Engineering Intern

Mar 2022 - Apr 2024
Morgantown, WV • Onsite

- Revamped Jenkins CI/CD pipeline architecture with a modular design, leading to a 70% reduction in build, test, and deployment times
- Refactored build infrastructure into reusable Jenkins components, reducing maintenance overhead and speeding onboarding for new engineers.
- Updated multi-platform mobile apps to current Android and iOS SDKs, improving stability and performance

River Point Technology

Software Engineering Intern

May 2021 - Aug 2021
Washington, PA • Hybrid

- Implemented Terraform Infrastructure-as-Code for AWS cloud resources, reducing new environment setup time by 50% and enhancing scalability
- Automated continuous delivery with GitLab CI/CD pipelines, enabling rapid deployments across staging and production environments
- Built a centralized MkDocs/Markdown engineering knowledge base documenting code patterns and runbooks, shortening onboarding for new contributors.

EDUCATION

West Virginia University

Bachelor of Science in Computer Science

May 2024

Morgantown, WV

- Dean's List
- PROMISE Scholarship
- Scholarship of Distinction
- Operating Systems
- AWS Senior Capstone
- Penetration Testing
- SysAdmin
- Blue Team
- Ansible
- AI/ML
- Custom Language Construction

PROJECTS

Devresumes.com

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Spring Boot, Java, PostgreSQL, OpenAI API, Stripe, GitHub OAuth, JWT, Docker, Jest, GitHub Actions

- End-to-end resume product: guided editing, PDF export with templates, and LLM-assisted parsing and import so uploads or pasted text become a structured profile; Spring Boot service calls OpenAI with validation and error handling.
- Next.js client uses React Hook Form and Zod, Stripe for payments, axios to Java APIs, and markdown or highlighting where it improves UX.
- Spring Boot backend: JPA with PostgreSQL, Spring Security, OAuth2 with GitHub, JWT; product features such as ATS-style scoring, job-description alignment, and Roast My Resume-style analyzers.
- Operations: Docker Compose-style local and production patterns, GitHub Actions CI/CD, deployment-oriented documentation for Railway or Render-class hosting.

<https://devresumes.com/>

US Election Tracker

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Netlify Blobs, Python, Node.js

- Data-heavy election site: presidential history and results, state hubs, live results, demographics and census-oriented pages, notable races, structured TypeScript datasets, reusable map and chart UI.
- Next.js API routes for election and related data; clear server and client split for performance and SEO.
- SEO: sitemap and robots, Open Graph and Twitter metadata, JSON-LD helpers, scripts to validate internal links and demographic data consistency.
- Python for tasks such as presidential history generation; Node scripts to build and validate datasets that feed the app.

<https://us-election-tracker.com>

dungeonhelper

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, RAG, OpenAI Embeddings, Pinecone, Anthropic Claude, Zod, Radix UI

- Destiny 2 dungeon mechanics assistant: RAG with OpenAI embeddings, Pinecone retrieval, Claude for streaming answers, Next.js API routes for chat and semantic search.
- Production-minded controls: Zod validation on requests, IP rate limiting, response caching to manage API cost and latency.
- Responsive React UI for filters and real-time help during contest-style play; streaming responses for perceived speed.

<https://github.com/justinscott12/dungeonhelper>

averylightfx

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, NextAuth.js, Next.js API Routes, axios

- Community holiday light-show site: visit information, donations, media, maps and drive-up context, seasonal theming such as Halloween and Christmas with client and server theme handling.
- Authenticated or admin-style flows where needed using NextAuth and bcrypt-backed credentials; API routes for schedule and theme-style data.
- Responsive marketing-style UI with Tailwind, imagery, navigation, and seasonal layout.

<https://averylightfx.com/>

youre-being-robbed

Tech Stack: TypeScript, React, Next.js, Tailwind CSS, Recharts, Lucide React

- Data-forward site on wealth inequality, wages, housing, healthcare costs, corporate profits versus wages, and related topics; tabbed navigation and section-specific document titles for SEO and shareability.
- Interactive charts with Recharts; consistent layout and typography with Tailwind and Lucide icons so dense statistics stay readable.
